

### Special Problem 2-4.14

Consider a vector  $\mathbf{A}$ , written in terms of orthonormal base vectors  $\hat{a}, \hat{b}, \hat{c}$ :

$$\mathbf{A} = 2\hat{a} - 2\sqrt{2}\hat{c}$$

Rewrite vector  $\mathbf{A}$  in terms of a new set of orthonormal base vectors  $\hat{i}, \hat{j}, \hat{k}$ , where the angles between the two sets of base vectors are given in the table below:

For example:

	$\hat{i}$	$\hat{j}$	$\hat{k}$
$\hat{a}$	$60^\circ$	$135^\circ$	$120^\circ$
$\hat{b}$	$60^\circ$	$45^\circ$	$120^\circ$
$\hat{c}$	$135^\circ$	$90^\circ$	$135^\circ$
