Technical Report TISL-10230-2

Telecommunications and Information Sciences Laboratory  
Department of Electrical Engineering and Computer Science  
University of Kansas

May 1994

This technical report consists of five papers that were presented at the IEEE Wichita Conference on Communications, Networking and Signal Processing on April 27 and 28 of 1994. Each of the five papers is a direct or indirect outgrowth of the project sponsored by Sprint and KTEC entitled "Development of Design Rules and Associated Tools for ATM Networks." Authors Braun, Lu and Mezger are Graduate Research Assistants (GRAs) funded under this project, authors Petr and Frost are faculty associated with the project, author Kelley is the Sprint project manager for the project, author Demirtjis was a GRA and is now a Sprint employee continuing work related to the project, and author Motoyama is a Visiting Scientist at TISL who has been doing research related to the project goals.

These papers are short and very readable, and they provide a snapshot of the range of research activities being undertaken as part of this project.

For a copy of this entire report, contact David W. Petr via email: [dwp@tisl.ukans.edu](mailto:dwp@tisl.ukans.edu).
